SUMMARY

Frontend Engineer who believes that every challenge shapes growth. With over 3 years of experience building a scalable online travel platform serving over half a million users, I've honed my skills in crafting intuitive, responsive UI/UX using React, Next.js and TypeScript. I thrive in cross-functional agile environments, working closely with stakeholders across teams.

TECHNICAL SKILLS

Frontend: React, Next.js, Vue, Svelte, TypeScript, Redux, TanStack Query, Jest, Tailwind CSS, SCSS, Framer Motion, Figma

Backend: Java, Spring Boot, MySQL **CI/CD|Others:** AWS, Docker, Jenkins, Git, Bitbucket, Jira, Sentry, Storybook

EXPERIENCE

Frontend Engineer · TIDESQUARE

Dec 2021 – Feb 2025 (3 years 3 months)

TIDESQUARE is a **travel enterprise** based in Korea operating multiple online travel platforms ([Tourvis](#), [Privia](#)) with **half a million monthly users**.

Frontend Architecture & Modernization

- Migrated a legacy Vue.js application to Next.js App Router, improving Lighthouse SEO scores by over 10 points through SEO optimization and enhancing overall application performance.

Product Feature Development

- Built a restock and reopening notification system using Redux-based workflows, custom calendar selection, and validation logic, increasing notification sign-ups for sold-out products by 30%.
- Enhanced payment workflows by implementing discount calculation and coupon synchronization logic across various checkout and cancellation scenarios.
- Improved the reservation workflow by handling 10+ dynamic input types with reusable validation logic, providing a consistent booking experience across multiple product categories.
- Built a unified travel search platform for flights, hotels, tours, and packages, improving search performance through TanStack Query caching and Skeleton UI optimization.

Cross-Platform & Mobile Integration

- Enhanced the mobile reservation detail page by integrating Google Maps navigation and native calendar synchronization, allowing users to manage travel schedules and destinations more intuitively.
- Resolved cross-platform PDF download issues in mobile browsers and WebView environments using Blob-based file handling and a Next.js middleware proxy.

Reusable Components & Maintainability

- Developed reusable booking components for voucher viewing, coupon management, and reservation workflows, reducing duplicated frontend code and improving maintainability.

Data Analytics & Experimentation

- Set up a dual-tracking analytics system using Google Analytics and internal event logging, enabling product performance and conversion analysis.
- Built a GA ID-based A/B testing framework, enabling controlled feature rollouts and rollback without additional deployments.

EDUCATION

Sookmyung Women's University

Seoul, South Korea | Mar 2012 – Aug 2017

- Bachelor's degree, Law / Media (Double Major)

Universiteit Leiden

Leiden, Netherlands | Aug 2015 – Dec 2015

- Participated Exchange Student Program in Liberal Arts and Sciences

MegaStudy IT Academy

Seoul, South Korea | Feb 2021 – Oct 2021

- Built multiple mini projects and a personal website, covering backend design (Java/Spring Boot), frontend development (jQuery/Bootstrap), database design (MySQL/MyBatis), and deployment on AWS.
